

## ABOUT My ROLE

For the past year I have been a DevOps intern at Disney, working in a small development team in the London Head Office. This has been a fantastic opportunity and I was very fortunate to get such a fantastic placement.

DevOps aims to help instil practices to help automate the processes between software development teams and software operations teams, so they can build, test and release software faster and more reliably. Over the year I have learnt many DevOps techniques and tools, and improved my own programming skills.

# My PLACEMENT YEAR AT...

## The Walt Disney Company

### Key CONTRIBUTIONS:

#### Intern Project

For this greenfield project I was working with two other interns in my team to develop an application to create and keep track of contractors timesheets.

- Used DevOps tools & techniques
- Implemented continuous integration pipelines
- Participated in Paired Programming
- Experience following Kanban methodology

#### Website Statistics Analysis

For this project I was personally given the task of analysing the statistics of 15 websites in our department.

- Experience using SQL queries
- Used Independent problem solving
- Created a Presentation of my findings which was used to form future business decisions of each websites viability
- Also used to help in assessments for the *Cloud Migration Project*

#### Intern Assessment day

For this project I was working with two other interns in my team to organise our departments assessment day for intern recruitment.

- Increased organisational skills
- Developed presentation skills
- Experience on the recruiting side of the recruitment process
- Used technical skills for developing and marking technical tests sent out

#### Cloud Migration Project

This is an ongoing project with the aim of migrating 300 applications to the cloud within 2 years.

- Participated in AWS Training
- Attended many meetings & took notes
- Helped with preliminary application assessments
- Documented on Confluence
- Programmed Lambda scripts
- Developed script for front-end testing

### TECHNICAL SKILLS GAINED:

- Git, GitHub & GitLab
- DevOps tools & techniques
- Continuous integration pipelines
- Programming languages Python & Ruby
- Data analysis
- Amazon Web Services
- Experience working in both Kanban & Scrum environments
- SQL queries & Databases
